# Update auth tokens

Sometimes you will need to update the auth tokens for Ziffit and We Buy Books. Follow the steps below to do.

1. Make sure you are on the home page

2. Press the three lines in the left corner

Here you will see two text boxes, one for Ziffit and one for We buy books.

3. Next, go to the We buy books website: https://www.webuybooks.co.uk/

4. Press F12, this will open Dev Tools

5. The dev tools is what is on the right hand side of the page. Look for a tab called 'Network', and press the button called 'Fetch/XHR' both in red boxes below.

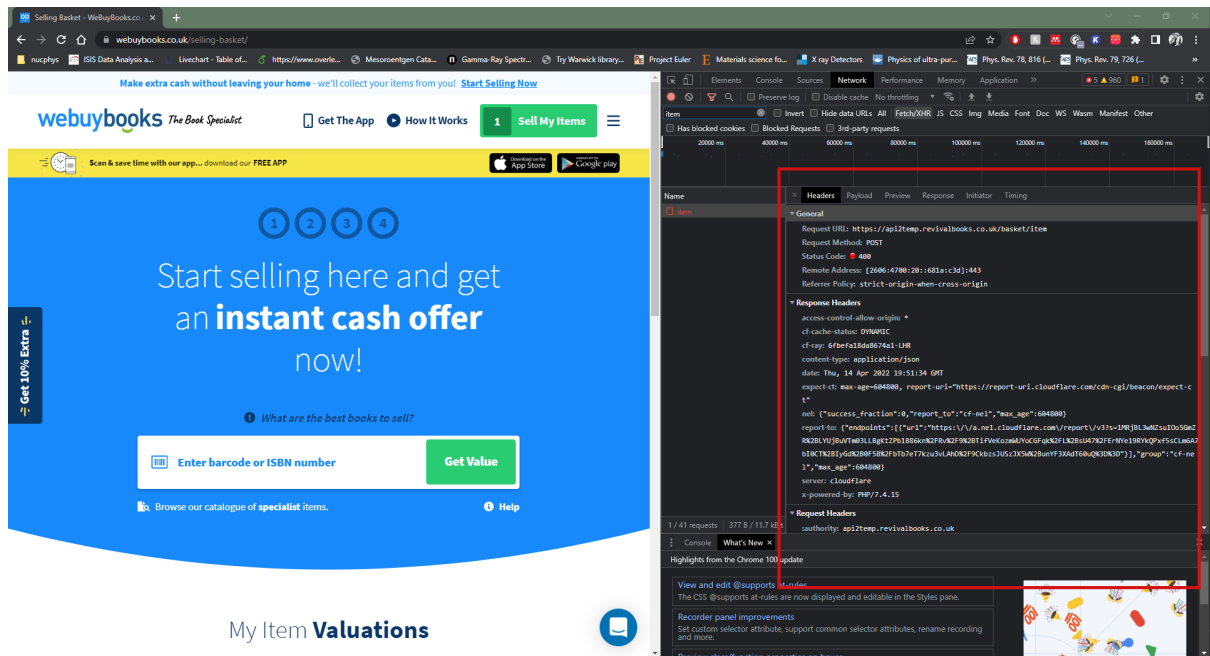

6. Then scan a book as normal and press the 'Get Value' button

7. In the Dev Tools panel, type 'item' in the searchbox

8. In the table below, you will see a listing with the value 'item' in the 'Name' column. Click that listing. You will see some information pop-up to the right. Make sure 'Headers' is selected.

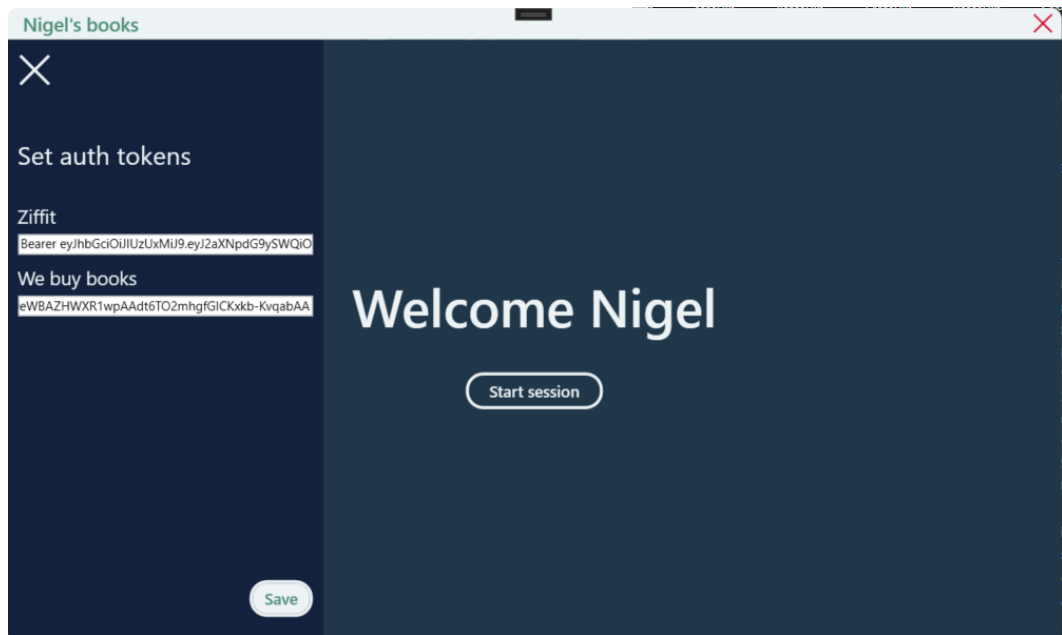

9. Scroll down on this list until you are in the 'Request Headers' section. Look for one called 'authorization.

10. Select all of this text from the word 'Bearer' and copy it (Ctrl + C)

11. Go back to the book app, and paste it in the text box for the corresponding website.

12. Press Save

It is a similar process for Ziffit, except in step 7, type 'cart-indicator' into the searchbox
